- 3 - GOOD very acceptable results
- 4 - VERY GOOD a proven application
- 5 - EXCELLENT a proven application

**GAC**-Granular Activated Carbon is one of the most powerful and efficient methods for improving drinking water quality. The table below shows many of the problems that are addressed by GAC. Keep in mind that with municipally treated water it is highly unlikely that the majority of these contaminants will ever be present. Chlorine (and its derivatives), is the primary concern. THM's & PCB's may also be a concern. As shown, GAC is excellent at treating these problems.
